

Tidbinbilla Lower Site—Paddy’s River

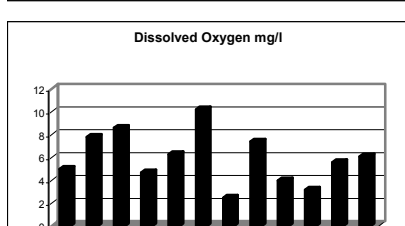

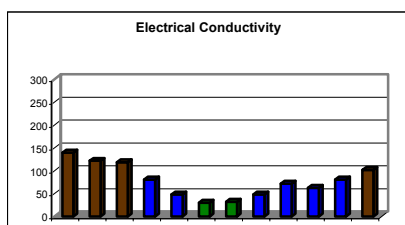

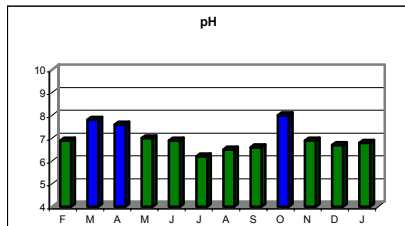

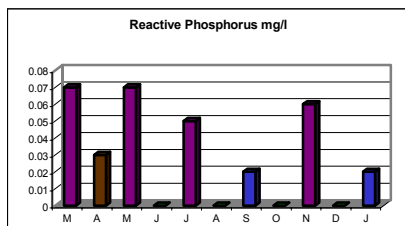

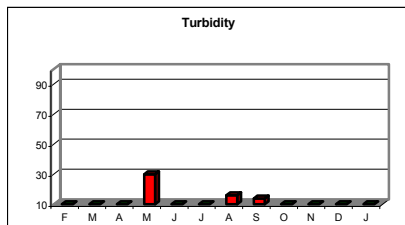

Participant Comments: Friends of Tidbinbilla

- Rain has affected phosphorus and turbidity. Both increased after heavy rain.
- High levels of siltation in months after the fires.
- More erosion present at this site, especially now after the fires.
- Cattle have been accessing this site after the fires.
- For a long time after the fires there was no regrowth, particularly ground cover and grasses.
- Major rehabilitation programs in progress with farm and creek fencing completed.
- Phosphorus levels have been higher since the fires.
