**Subject:** Re: FOI request - Crace - additional information required

Hi Heather,

I've left a message for you this morning in relation to your email.  
[REDACTED]

**All information in relation to the removal of the playing field/oval/open space**

This part of your application is extremely broad and non specific. Additional information is necessary to identify documents relevant to your application, such as, which specific types of information you seek.

In regards to this question, if you look at the original plans of Crace section 80 did not exist, it was actually a playing field. So I am wanting to know when were the plans changed to remove the playing field and replace it with houses Who made the changes and why

**All information in relation to Fill type, soil testing and regrading in section 80 Crace**

This part of your request is broad and covers information regarding 13 separate blocks; and includes records from prior to subdivision. Please identify the specific block and section relevant to your request to enable document identification to occur.

[REDACTED] 80 Crace

**All information in relation to All Civil / Engineers reports and plans of Crace and in particular section 80 Crace**

This part of your request is extremely broad and non specific. This would capture any records relating to the planning and development of Crace, and all blocks within. As worded this part of your request is not specific enough to identify the government information applied for and therefore does not meet the criteria of section 30 of the Act. Please advise which block you refer to, to enable us to identify the records.

[REDACTED] 80 Crace

**All information in relation to Waterways and Creeks in Crace**

This part of your application is unclear and not specific enough to enable document identification to occur. It does not meet the requirements of section 30 of the Act. More information is needed, for example, which type of records are you seeking.

During the planning stage of the Development /Sub division of Crace, was there any Creeks or Water Ways in the area and if so what recommendations were made to planning about the creeks and waterways (for example: had they been advised to preserve all waterways and creek lines and incorporate them into the development of the suburb. The section I am particularly interested in is section 80 of Crace.
